EuFMD Fund for Applied Research (EuFMD-FAR)

8th Call: Request for proposals

Funding of circa **EUR 50 000** is available to support up to **three proposals to evaluate the performance of surveillance for clinical FMD among small ruminants**. The project should be field-based with the geographical focus in European Neighbourhood countries (North and West Africa, the Middle East, and the South East European Neighbourhood¹).

Background

The European Commission for the control of foot-and-mouth disease ([EuFMD](#)), under the multi-annual agreement with the European Commission (EC, DG-SANTE), has since 2008 provided support for small applied research projects that are relevant to the technical issues that are seen as priorities of the EuFMD member nations². The thematic priorities have been typically identified at the biennial General Session, and a specific research fund was adopted as [component 1.5](#) of the 4-year, EC funded [Workplan](#) of the Commission which was renewed in October 2019.

The Strategic Plan of the EuFMD for the period 2019-23 has three Strategic Objectives ([Pillars](#)), which are:

1. Improving preparedness for management of foot-and-mouth disease (FMD) and similar transboundary animal diseases (FAST diseases) crisis by members and across Europe as a whole;
2. Reduced risk to members from the FAST diseases situation in the European neighbourhood;
3. Sustaining and enhancing progress in the roll out of the GF-TADs Global Strategy for control of FMD, and on increasing security in the supply of effective FMD vaccines.

The Plan was updated and adopted at the 43rd General Session of the EuFMD member nations in April 2019. The 8th call scope relates to priorities identified by the EuFMD Standing Technical Committee and agreed with the EuFMD Executive Committee at the 99th Session in April 2019.

¹ SEEN neighbourhood as defined within EuFMD Workplan includes: Armenia, Azerbaijan, Georgia, Iran, Iraq, Turkey, and Pakistan

² [EuFMD member nations](#) (by May 2020): Albania, Austria, Belgium, Bosnia Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Latvia, Lithuania, Luxembourg, Malta, Montenegro, Norway, Poland, Portugal, Romania, Serbia, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, North Macedonia, The Netherlands, Turkey, and The United Kingdom.

Description of Theme and Expected Results

Expected results:

1. Quantification of the sensitivity and specificity of clinical surveillance for detecting FMD in small ruminants at the individual and group level in different endemic settings;
2. Recommendations on the use of clinical disease surveillance among small ruminants as part of a risk-based surveillance strategy for FMD.

Impact of the results:

The results of this proposal will be used to guide surveillance strategies among small ruminants in countries of the European neighbourhood and provide risk information to EuFMD member nations and European neighbouring countries for an improved early warning.

Context:

FMD is endemic in numerous countries in the European neighbourhood where there are large populations of small ruminants. Small ruminants are known to be susceptible to FMD infection although the clinical signs tend to be milder than cattle or pigs and are often described as “subclinical” although the clinical presentation may vary with different viral strains (Barnett & Cox, 1999).

Introductions of FMD virus into free settings have demonstrated that sheep movements can lead to long distance transmission evidenced by the UK 2001 epidemic (Gibbens et al., 2001). Experience gleaned from surveillance activities indicated that lesions indistinguishable from FMD can be detected in the oral cavity of sheep yet be negative for infection (Watson, 2004). In endemic scenarios, although serological surveys frequently reveal significant levels of viral exposure in small ruminants, their role in the epidemiology of FMD is poorly quantified and likely to vary with the particular production systems and value chains present (Balinda et al., 2009; Blanco et al., 2002; Dukpa et al., 2011; Elnekave et al., 2016; Ranabijuli et al., 2010; Rout et al., 2013). Moreover, serological surveys are inherently retrospective and are unlikely to indicate the current disease prevalence and risks of virus transmission as part of an early warning surveillance strategy.

The Progressive Control Pathway for FMD ([PCP-FMD](#)) is a stepwise tool for control of endemic FMD aimed initially at reducing disease impact before progressing to reduced virus circulation and eventual elimination depending on the national objectives (FAO and OIE, 2018). A key component of the PCP-FMD is the creation of a risk-based approach to disease control. This includes the use of risk-based surveillance where the probability of occurrence is taken into account and resources are more efficiently allocated (Hoinville et al., 2013). To further understand the role of small ruminants in the epidemiology of FMD and their inclusion in a risk-based control strategy, it is necessary to quantify the sensitivity and specificity of surveillance for clinical disease at **both** the individual and flock/herd level.

Guidance on Proposal

Essential elements to proposals:

- The studies should take place in field settings in an FMD endemic region;
- Eligible regions include: North and West Africa, the Middle East, the South East European Neighbourhood;
- Evidence must be provided that study permissions will be granted and the field work logistics can be managed without the assistance of EuFMD or FAO;
- Inclusion of all laboratory costs.

Desirable elements to proposals:

- Consideration for sample size and the risk-based selection of the study herds/flocks;
- A demonstrable history of managing field studies among livestock populations in the target regions;
- Contingency plans in case of no FMD outbreaks occur during the study period;
- Digital data collection (e.g. using mobile phone devices);
- Include three different endemic settings although single settings will be considered (see “Funding available and timeframe”). If covering multiple scenarios, they should be sufficiently diverse in terms of geography, epidemiology or production systems;
- Plans to submit the work for peer-review publication;
- A communication plan with EuFMD and the national government as appropriate.

Proposals should be based on the application form, completed in **English or French** only, and be of a **maximum of 5 pages** including figures and tables (but excluding references and appendices) using Calibri font (size 10) and 2.54 cm page margins and submitted as PDF or MS Word files. In addition to that indicated in the application form, proposals should consist of at least the following sections:

- Study area and time period
 - Identification of study area(s) and time period with evidence that FMD will likely be encountered during the study.
- Study design
 - Detailed study design including sample size calculations and frequency of sampling.
- Laboratory assays
 - Details of any proposed laboratory assays and the capacity to perform those assays (with a laboratory partner if required).
- Data analysis
 - Methodological approach to data analysis and the parameters that will be estimated.
- Budget and progress indicators
 - Detailed breakdown of expenditure;
 - Gantt chart, milestones and deliverables to include at least one interim report.

The application form is given in **Annex 1 (part A)** and is available for [download HERE](#).

All queries should be directed to eufmd@fao.org using the subject line “FAR call - small ruminant surveillance”. All queries should be in either English or French and submitted by 12 June 2020. Responses are not guaranteed to queries submitted after this date.

Funding available and timeframe

The total budget envelope at this point is circa EUR 50 000. This is to cover field work costs in three different settings (i.e. EUR 10 000 per setting with an additional EUR 20 000 available for all laboratory costs). One application may cover one, two or three settings with a maximum request of EUR 50 000 allowable for a proposal covering all three settings. Proposals will be considered for one or two settings with the budget adjusted accordingly (i.e. circa EUR 16 500 per setting to cover all field work and laboratory costs).

The deadline for submission of proposals is **19 June 2020 at 5 pm CET**. The field work should take place over a maximum of six months with the final report provided by the end of June 2021.

Notes on the funding

The funds are expected to be used mainly to provide expertise to undertake the studies. The proportion of expenses related to travel and procurement should not exceed: 20% for travel and 10% for procurement. Any additional expenses needed for implementing the project should be indicated in the application form.

General:

1. Payments

Payments are usually made in three tranches, the initial advance being not greater than 30 percent, and final payment not less than 20 percent. Normally, payments are made upon acceptance by the Research Organization (RO) of a report or deliverable. The interim payment is conditional on interim reports/progress and the necessary milestone indicators will be agreed with the Research Organization. The final payment is conditional on the submission and acceptance by the Research Organization of a final report consisting of a narrative report and financial report.

2. Eligibility of costs

- Currency: the Letter of Agreement (LoA) should be expressed in the currency in which the majority of the LoA expenses are expected to be incurred.
- Non-eligible costs for financing (EU funded projects):
 - overhead costs;
 - administrative;
 - any other indirect costs.

3. Budget drafting some useful indications (a template is provided in Annex 1, part A)

3.1 Human Resources - Personnel: -insert wording **Experts** – Avoid wording “Consultant”.

3.2 Procurement & Expandable equipment ancillary to services

(Include Non-disposable and Disposable Equipment/Material)

- Non disposable Equipment: Beneficiaries receiving benefit at end of the project should be precisely indicated in the Description of the services.
- Total amount of budget dedicated to purchase of disposable equipment not to be more than 5% of total procurement.
- Disposable Equipment (intended as consumable) should not be charged than more than effective cost.
- FAO could ask to provide proforma invoice/or quotations of supplied consumables/materials) to indicate final Beneficiaries and who will keep equipment at the end of project as results and implementation of service after end of Agreement.

In case of sub-contracting or partnership where the RO wishes to work with additional parties:

The FAO form of agreement is strictly bilateral - and must be only between one unique partner and FAO/EuFMD.

The direct partner needs to be the sole and unique counterpart with FAO in the complete wording of the agreement/Letter of Agreement (LoA).

The wording in the LoA and Note for the File needs to be in the active tense, where the partner is clearly responsible and not to mention any other entities if not under partner supervision and responsibility.

Any kind of partnerships in LoA **must be eliminated with no wording related to sub-contracting or other partners in the budget section are to be mentioned.**

LoA establishes rights and obligations for the two Parties signing the agreement.

Where the RO works with partners, the Agreement must state:

“The direct partner assumes the risk of non-performance of other partners (names to be specified) and any other subcontractor for all the services that will be provided within the framework of the current LoA”.

1) TRAVEL: (to include estimated cost per person and origins/destinations)

- Nb persons : _____
- Destination : _____
- Duration: _____
- Estimated cost:
 - Flights (Economy rate): \$/€ _____
 - Transport: \$/€ _____
 - Accommodation \$/€ _____
 - Visa fee: \$/€ _____

Applicants

Applications are welcome from any source and are not limited by geographical origin. Awards are normally made to not-for-profit research centres or organizations with a capacity for signing the contract, with principal investigators capable of delivering quality research and/or other project outputs, and for managing funds and reporting. For-profit bodies are welcome to apply as part of a consortium but normally the financial award can be made only to the Leader which should be a non-profit organisation. Interested parties can discuss ideas prior to proposal with the Secretariat or Members of the Standing Technical Committee.

The applicant should declare this contact with the STC on the form.

The application form is given in **Annex 1** (part A and B) and is available for [download HERE](#).

Review Process

Applications will be assessed in two stages, first by external referees (“Referee Panel”) then by the Standing Technical Committee (acting as the Grant Review Board [GRB]), a multidisciplinary panel of experts who are familiar with the priorities and scope of the fund and the context of the institutions which are expected to utilise the knowledge, tools and outputs.

Two-Tiered Peer Review Process

1st Review by Referee Panel

- TWO external referees are chosen for their expertise in specific technical areas and geographical regions; at least one of these is from the EuFMD Special Committee for Surveillance and Applied Research.
- Initial review of technical merit and feasibility of the proposal.
- Review of the evidence of the applicant’s, past and future, capacity and presence in the selected country.
- Score and give comments on each grant application.

2nd Review by Grant Review Board

- Assess quality of Referee Panel's comments.
- Final review of technical merit and feasibility and evidence of the applicant capacity and presence in the selected country.
- Evaluate relevance to scope of fund and thematic priorities, applicability to local context, applicant's track record, administering institution's research capability, "value for money" of proposals.
- Make recommendations on funding to the EuFMD Executive Committee.

Assessment Criteria

These are provided in **Annex 2** and available for [download HERE](#).

Composition of the Referee Panel

The Referee Panel includes the 15 members of the Special Committee for Surveillance and Applied Research ([SCSAR](#)) of the EuFMD. The Referees for each proposal will be selected by the Chair of the STC, or in the case of a conflict of interest, his/her Deputy. One referee must always be from the SCSAR but according to need, the Chairperson may also invite an external referee to undertake the review if the expertise is not present within the SCSAR. Reviewers complete a conflict of interest statement before reviewing proposals.

Composition of the Grant Review Board (GRB)

The GRB is composed of the Members of the STC and the Executive Secretary of the EuFMD Commission. DG-SANTE have the right to be represented in the GRB. Representatives of the GRB complete a conflict of interest statement before review, and if doubt exists, do not take part in the review of the applications in which a conflict of interest may exist. The Chairperson should ensure a minimum of at least three persons participate in any decisions, co-opting a member of the Executive Committee if required. *Minutes of these meetings will be reported to the EuFMD Executive Committee.*

Award of Grants and dispersion of funds

The EuFMD Secretariat will provide the Executive Committee with the recommendations for funding. Decisions will be normally taken by the Executive or the Chairperson of the Executive together with the EC at the regular Executive Committee Sessions taking place at six monthly intervals. If urgent, decisions will be taken by the Chairman and the representative of the EC as soon as the GRB have made their recommendations.

Funding will be dispersed by the EuFMD through Letters of Agreement (LoA) which are contracts between the Food and Agriculture Organization of the United Nations (FAO) and not-for-profit institutions. In exceptional circumstances, the funds may also be dispersed through direct implementation mechanisms by the Secretariat where LoAs cannot be used. The application form should provide most of the details needed to enable the LoA to be finalised quickly after decision is taken, and initial funding dispersed. Limited changes to the proposal may be agreed when the LoA is negotiated and any major changes would require a review by the Chairman of the STC.

The reporting schedule will be set at the time of the LoAs being agreed and normally the contractees must provide reports that coincide with the timing of the six-monthly STC meetings and provide an oral report to the biennial Open Session of the Standing Technical Committee.

Annex 1: Application form

The text in green has been included to help you to complete the template. Please delete it before finalizing your application.

Application for funding from EuFMD-FAR

PART A: TECHNICAL and PART B: ADMINISTRATIVE

PART A: TECHNICAL

1. Title of the study (and acronym, if long):

2. Applicant name and institution:
Provide also address, e-mail and phone contact details

Lead Investigator (if different):

Is this application made on behalf of several parties (collaborators whose inputs will be vital to success)?
YES/NO. If YES, give details
 - a. Add*
 - b. Add #2 etc.*

3. Has this proposal been discussed with members of the EuFMD Standing Technical Committee (STC) or Secretariat before application?
YES/NO.
If yes, indicate who and in what time period. Prior discussion can often be helpful to applications, but for transparency the extent of involvement of STC in steering proposals should be known by the Review Board.

4. Description of the capacity of the applicant(s) to undertake the work proposed
This can use links to documents/website, but should cover why the applicants consider they have the capacity to undertake the work and manage the studies within the time –frame expected

5. Technical background
Up to a maximum of 500 words (excluding references) to demonstrate an understanding of the study objectives, indicate why the study/project approach was been selected, and any relevant references to methods that are essential to success of the approach but not yet widely accepted or applied.

6. Definition of outputs
6.1 Simple and short definition of what the Service Provider will do:
Conduct a field-based study, design and develop a system, etc.

6.2 Simple and short definition of what the provider will PRODUCE: i.e. Outputs

These will be used by FAO to verify progress, for payment purposes, as for example a narrative report is used to justify interim payments.

Example:

- Provide an interim report on project activities upon completion of the field survey;
- A final report detailing the activities conducted under the collaboration, which will be presented to the EuFMD Standing Technical Committee and may be published on the EuFMD website.

7. Description of project/study plan, activities and/or services to be provided by the applicant(s)

The detail to be provided must be sufficient to allow assessment of:

- the appropriateness of the method used;
- the feasibility and sustainability of the system proposed;
- the data that will be generated for analysis;
- the efficiency of the design and use of inputs.

8. Workplan and Timeframe (duration)

The timing of major activities and milestones must be given, either in relation to the date of signature of the agreement/first payment, or in relation to monthly calendar if the project is affected by season, for example. A date of final report shall be proposed, note: final report should be provided by the end of June 2021 and must be submitted in either English or French.

Example:

Milestone	Details (example)	Due date
1.	Field survey and Interim report	+6 weeks after 1 st payment
2.	Data analysis and Final reporting	+10 weeks

9. Inputs required to implement the project

A. Inputs to be provided free of charge by Recipient Organization

Indicate what is provided as part of the capacity of the applicants, and what additional support will be used for.

Example: The Service Provider will make available a technical/field team and FAO will make a contribution towards the overall cost of staff resources. Remaining time is provided free of charge by the Service Provider, during the overall timeframe of the Letter of Agreement (LoA).

B. Inputs to be provided in kind (not monetary contributions) by EuFMD or FAO

List of non-monetary Inputs

This can include guidance from the Secretariat, requests to assist the proposers with liaison with national authorities in countries where studies are proposed, etc.

C. Monetary inputs from FAO/EuFMD (Budget requested).

Note a detailed description of costs as estimated by Service Provider can be given in an Annex

The usual schedule of payments for LoAs is an initial payment, an interim payment (upon an interim report) and a final payment after completion. The initial payment is usually not more than 30% of total. Indicate if there are specific need for a different schedule of payments, for example the majority of costs are up front for animal experiments, etc.

As far as possible, use a summary table with budget lines that your institution is prepared to report on later (in the Final Financial Report), and a separate table indicate how these were calculated.

Please refer to the Section “Notes on the funding” of the present document.

Example of a summary:

RESOURCES-BASED BUDGET TEMPLATE					
Cat. No.	Items Description	Unit of measurement	Q.ty (no. of units)	Unit Cost	Total Cost
				USD/ Euro	USD/Euro
1	HUMAN RESOURCE INPUTS Use wording: EXPERT and never consultant				
1.1	Technical expertise (days can be specified)	person	N (XX days)		
1.2					
Total	Total expertise		XX days		
2	PROCUREMENT & EXPENDABLE EQUIPMENT ANCILLARY TO SERVICES (Include Non disposable and Disposable Equipment/Material)  Non disposable Equipment: Beneficiaries receiving benefit at end of the project should be precisely indicated into the Description of the services  Total amount of budget dedicated to purchase of disposable equipment not to be more than 5% of total procurement  Disposable Equipment (intended as consumable) should not be charged than more than effective cost “FAO could ask to provide proforma invoice/or quotations of supplied consumables/materials)				
2.1	Consumables	Lump Sum	LS		
2.2	Shipping	Unit	N		
2.3					
	 to indicate final Beneficiaries and who will keep equipment at the end of project as results and implementation of service after end of Agreement				
Total					
3	TRAVEL (Flights, inland travel)				
	Travel Description Nb persons ; _____ Destination : _____ Duration: _____				

	Estimated cost: Flights Economy Return: \$/€____ Transportation: \$/€____ Arrangement: \$/€____ Accommodation \$/€____ Fee Visa: \$/€____				
Total	Preparatory and participatory training workshop				
4	GENERAL OPERATING EXPENSES AND MAINTENANCE EXPENSES				
4.1	Field activities implementation (data collection)	Lump Sum			
4.2					
Total	Field activities				
5					
Total					
	GRAND TOTAL				
 being an EU funded project, overhead costs - administrative and other indirect costs are not eligible for financing by the EU					

D. Bottlenecks/risks :

Indicate any assumptions that must hold if the activity is to reach expected output.

Indicate risks that could have a significant impact upon progress (and which might justify later requests for extension or change in plan, for example).

E. Appendices

Including copies of research cited that is vital to the understanding or evaluation of the proposal can assist and not freely available online.

PART B: ADMINISTRATIVE

Curriculum vitae of the lead applicant and any significant research partners should be provided.

Details on the Entity/Institution that is proving the administrative capacity may assist if the entity has no track record with FAO of LoAs or is non-Governmental.

1. Details on the lead applicant(s)

The applicant is normally expected to be the contact point and provide the reports.

2. Details of any significant research partners on this proposal

It is important to indicate their expertise/competence/capacity to assist the proposal, and what added-value they provide to that provided by the lead applicant.

3. Details on the Entity that will sign any financial agreement

4. Name and title of the person who will sign a financial agreement (the Signatory for a LoA with FAO)

If Letters of Agreement (Standard Contract) with FAO are not feasible then suggested route for payment of the inputs required to undertake the activity:

5. Version number:

The applicants Version number – useful in case changes are made

6. Date of this submission:

Annex 2: Assessment criteria

Referee's Assessment

TWO External reviewers are invited to review each application, and to both objective and specific in their critical appraisal of each grant application, and to focus on the scientific merit and significance.

Technical merit:

- Originality;
- Relevance to the fund and thematic priorities;
- Quality of methodological, technical and operational approach;
- Feasibility of the proposal;
- Evidence of the applicant's capacity and presence in the selected country (including past and upcoming commitments);
- Applicability and sustainability of the outputs.

Grant Review Board

After review by the Referee Panel, each proposal will be discussed further, bearing in mind the track record of the principal applicant, the technical capacity of the administering institution and the value for money of the proposal. Funding recommendations will be finalised in the Grant Review Board meeting. Summary statements containing questions, comments and/or recommendations will be forwarded to the applicant.

Technical merit (see above) plus:

Relevance to the scope of funding:

- Is the topic within the scope of the fund and the thematic priorities?

Track records of the applicants:

1. What is the likelihood that the proposed study can be accomplished by the applicant organization given the documented experience and expertise? Track record includes the applicant's compliance with the terms and conditions of previous projects and records of outputs.

Technical capacity of the administering institution:

- The ability of the administering institution to provide an environment conducive to productive and sustainable outputs, in terms of:
 - ~ national/local presence and expertise;
 - ~ qualified technical staff;
 - ~ qualified support/administrative staff.

The emphasis placed on each aspect varies between applications, depending on their relative strengths.

Rating a Grant Application

A score ranging from **4** (Recommended for support / High) to **1** (Not worthy of support / Low) will be assigned by the referees to indicate the technical merit under each heading in the Referee's Assessment Form. The overall rating for each application will be discussed and finalised in the Grant Review Board meeting. The overall rating is defined as follows:

4 - Recommended for support	Nil or very minor issues to address only
3 - Recommended for support subject to clarifications/ amendments	Minor revision and clarification required for a successful delivery
2 - Not recommended for support at present	Major revision required for significant improvement
1 - Not worthy of support	Minimal impact on research / flaw in methodology/ incomplete application/ out of scope of the fund
